

# Contribution Office Calendar

## **Bryan**

I worked on multiple aspects of this project. I designed the complete user interface to ensure a consistent and cohesive frontend style across the application. I developed key features such as the employee calendar for indicating work locations, task management, event management, and the dashboard overview. In addition, I supported the team wherever needed throughout the project.

## **Sem**

I worked on the login and register. Changing (updating) you're profile, and the admin side where you can manage users and events

## **Ridwan**

I made the create event form that lets a logged in user create an event at a specific date and time with a description and location. I also made the teams page that lets the logged in user see their team members and their calendars. And also made it visible in the overview page.

## **Zakaria**

I have been working on showing the events and showing the event details on a separate page which includes joining and leaving a review behind.
